### **DETAILED ACTION**

Receipt and entry of Applicant's Preliminary Amendment dated August 31, 2006 is acknowledged.

#### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose or render obvious the claimed combination including comparator means for comparing the temperature level with a safety threshold value for the turbine of the turbocharger so that in the event of the threshold value being exceeded while applying the second level strategy, the feed means are controlled so as to regulate at least one of the engine operation control parameters progressively so as to reduce the temperature level in the exhaust line, and if the temperature level does not drop below the threshold value at the end of a predetermined first time period, the feed means are controlled to switch over to the first level strategy, and if the temperature level in the exhaust line still does not drop below the safety threshold value at the end of a second time period, the feed means are controlled to stop the regeneration strategy.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### ***Prior Art***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and consists of six patents:

Kuenstler et al. (Pat. No. 6644020), Ohtake et al. (Pat. No. 6931842), Ootake (Pat. No. 6843055), Kawashima et al. (Pat. No. 6348177), Shirakawa (Pat. No. 7007463), and Gui et al. (Pat. No. 6829890) all disclose an exhaust gas purification for use with an internal combustion engine.
